OUTDOOR LIVING POD™ PRESTIGE ROTATE & SLIDE

The *ingenious design* of our latest Outdoor Living Pod™ mean the roof louvers not only rotate clockwise through 135 degrees to provide precise sun control and ventilation along with being 100% water, wind and snow tight when closed but also **completely slide open** for maximum sunlight and the ultimate open air alfresco experience.

The stylish 'S' shape of the aluminium roof louvers mean the build up (stack) of louvers when open is only 13% and the powerful motor which is built within the structure framework takes less than a minute to fully slide open the largest roof.

- Freestanding, 4 posts installed stand alone or abutting a property
- Concealed base plates within the uprights for an invisible attachment to the ground
- Internal guttering system with drainage through downpipes hidden within the uprights
- Motors discreetly built within the structure framework
- Remote control operation for effortless functioning
- Hardware available in any RAL colour (choice of over 200)

Options

- Dimmable LED strips around internal perimeter of framework on all sides for ambient evening lighting
- Infra-red ultra low glare radiant heaters mounted to the side cross beams for instant warmth
- Windproof motorised screens to the sides, built under the framework in mesh fabric (with optional clearview window)
